

"10 Minutes"

Pleased to meet you

Meet

Tor-Björn Johansson

CTO and team leader R&D for EMSYS and expert in the field of vision technology

Tor, how did you build up experience in vision technology?

"After my civil engineering education I started as a research assistant at the University of Leuven and obtained my PhD in applied sciences.

Throughout my career I worked as a developer for Barco, LCI SmartPen, Philips, ICOS, Phaer and Eurocontrol. I also teach various aspects of vision such as optics, lenses and algorithms. "

What are the main benefits of vision technology?

"First and foremost, it increases the quality of the production. Secondly, vision systems lead to a significant cost reduction."

What makes the approach of EMSYS so special?

Our competence lies in the choice of camera, lenses, lighting and algorithms in function of your problem.

Because we separate the software from the hardware, we have more flexibility in the choice of the hardware and more programming possibilities with the software.

This way we can offer more effective solutions.

How do you involve the customer in the development process?

We have invested in a test lab. Here we can simulate the situation of the factory.

The customer is welcome to see the system in operation and to evaluate the results.

May we invite you?

Little time and you want to stay up to date with the latest developments in vision technology?

Emsys offers you a 'tailor made' info session! Tell us **where**, **when** and **what** information you need.

Sign up now and receive a free invitation for the Emsys academy.

Through the Emsys academy we want to inform our (future) customers about the latest developments in **vision technology**, **RFID** or **WMS** with **barcode scanning**.

These info sessions are very concrete and practical. Give us two hours of your precious time and you are fully up to date. **Sign up now!**

Wondering what topics you can expect?

Do you prefer us to **contact you personally**?

Meet other people in your business area

We organize info sessions in your country about topics that concern you.

That's not all. Before or after the information session, we invite you for a drink and a snack.

A perfect time to get acquainted with the other participants. What are their experiences and challenges?

Do they have solutions that also work for you?
